HOME OF HARDY NORTHERN GROWN QUALITY PLANTS

Our New Ultra-Modern PACKING HOUSE and OFFICES

**HELP US GIVE YOU
EVEN BETTER SERVICE**

Finest Quality Freshly Dug Plants

Pre-cooled in our spacious cooler is your assurance of plants arriving in A-1 planting condition. Plants arriving too early for planting can be placed in basement or cool place, removing wrapping, keep roots covered with damp moss or earth until weather is favorable for planting.

Hardy Northern Climate

Our northern climate in the great Michigan Fruit Belt is ideal for growing thrifty, hardy nursery stock, being located so near Lake Michigan, which puts a damper on our winters, making the climate such that our nursery stock is practically dormant until late in spring. Bear in mind, Mr. Fruit Grower, plants that are dormant so late in the season have little foliage and carry well in transit, that is one of the reasons why our plants can be shipped long distances with the best of results.

Only The Best From Westhauser's

In spite of the terrible drought we have produced a healthy lot of extra heavy rooted, quality plants. Our good fortune during the unusually dry weather was not merely accidental—it was due to the careful selecting of the strongest plants of the best varieties planted, to our "years-ahead-plan" of preparing the soil—and expert care after planting, as well as furnishing moisture with our Modern Irrigation System. For eight weeks during the severe drought we pumped 24,000 gallons of warm creek water per hour to insure our plants of ample moisture, as we wanted to be sure our customers would get nothing but first class plants, no immature plants. **ONLY THE BEST, Heavy-Rooted, Northern-Grown Quality Plants. SUPPLY LIMITED! ORDER EARLY! AVOID DISAPPOINTMENT!**

No Effort Too Great For Additional Fertility

We make a practice of feeding livestock. The photo above speaks for itself. We do not sell steers in our catalog, neither are we in the cattle business for profit, but no effort is too great to keep our producing soils in the highest state of fertility, which means **THRIFTY, HEAVIER ROOTED NURSERY STOCK.**

Member of the Michigan Association of Nurserymen, American Association of Nurserymen, and National Mail Order Nurserymen's Association.

WESTHAUSER'S BROAD GUARANTEE. We guarantee our nursery stock to be first class in every respect, free from disease, freshly dug, true to name, and to leave our packing house in good growing condition. We will, at our option, either replace free of charge or refund your money on any shipment which arrives in bad condition, providing claim is made within five days after arrival of shipment, with a signed statement from your express agent or postmaster, showing the extent of damage. It is mutually agreed between customer and ourselves that we cannot be held liable for any amount greater than the original purchase price. Our stock is carefully handled and full of vitality and under ordinary conditions should grow for you. Report any error on our part immediately upon receipt of shipment. We will not entertain any claims entered after July 1st.

GREAT MASTER, A New Late Money Maker

Great Master is a seedling discovered fruiting years ago. After watching this berry and putting it to the most rigid tests we were amazed to find it really exceeded our fondest hopes. It is a large, real firm, fancy, glossy berry with a superb flavor of its own, outbears other spring berries two to one. The plants are large and thrifty, making many runners, but space their plants far enough apart to insure large sized berries. They ripen about three weeks after Premier and mature every berry to full size. Watch GREAT MASTER, buy some plants now and be the first in your locality to grow this outstanding wonder berry. Prolong your fruiting season and have fancy berries when the others are gone.

Original Grand Champion

An Exclusive Westhauser Introduction

Only From Westhauser's Can You Buy The Original Strain

Grand Champion found as a single seedling on a decaying stump, has won popularity with amazing rapidity. The first year it produced thirty plants, which were set out on a space of 66 square feet. The following spring we harvested 105 quarts of berries off this setting. **THINK OF IT—OVER 13,400 QUARTS PER ACRE.** During the harvesting we picked 1920 quarts from less than one-seventh of an acre or the equivalent of 13,400 quarts per acre. **BEARS OVER 40 DAYS.** We began picking in the middle of the Premier harvest and were still picking **GRAND CHAMPION** with the later varieties.

NO CROP FAILURES ON ACCOUNT OF SPRING FROST. Its tall mass of foliage protects the blossoms from late freezing. It would not be saying too much if we called Grand Champion the **SPRING EVERBEARER**, as we have picked Strawberries for 40 days. On account of its continual blooming, crop failure is almost impossible.

NO FINER QUALITY. For quick freeze, canning and preserving; really in a class by themselves, as they are coreless and retain their shape and flavor in the can. Buyers of fancy fruit are attracted by their rich red color, extra large size, and the beautiful appearance of such high quality.

Here they are!

Those GREAT BIG DELICIOUS GIANT HYBRID BLUEBERRIES

- Beautiful
 - Profitable
 - Very Ornamental
 - Last a Lifetime
- HUGE SUCCESS! PROSPERITY
CREATOR FOR COMMERCIAL
GROWER**

Not only do cultivated BLUEBERRIES produce large, juicy berries two to three times as large as common Blueberries, resembling a bunch of Delaware Grapes, but they are beautiful ornamentals, ranging from 6 to 8 feet in height. Foliage is dark green and narrow. Blooms bell-shaped and pinkish white. Here in Berrien County, the HEART OF THE FRUIT BELT, local growers are planting Blueberries extensively and receiving rich harvests ranging from \$1000 to \$1500 per acre. Each year they are increasing their acreage. Orders from these farmers are so numerous that it is not possible to propagate Blueberries fast enough.

Cross Pollenization

At least two plants should be planted together for cross pollenization. This insures more and larger berries.

For Quick Results Plant GIANT 5-YEAR TRANSPLANTS

Bear a good crop the first year, averaging 2 to 3 feet. Your investment repaid in a short time. Big money later, considering a bush reaches its full fruiting stage at 9 years, a 5-year bush is well on its way and often pays more than it cost the first year. These plants are packed in Westhauser's Gro-Kwick, Nitro-Organic Humus, which can be used in transplanting. 5-year, 2-3 ft., 2 for \$7.90; 4 for \$15.00; 10 for \$35.00. Net, No Discount.

All Blueberries are packed in Westhauser's Gro-Kwick, Nitro-Organic Humus, which can be mixed with your soil and used in planting. For additional Acid Gro-Kwick, see next page.

HOW TO GROW BLUEBERRIES SUCCESSFULLY

Make openings three or more times larger than the roots, large enough to receive all the roots without crowding. Mix the dirt, removed from holes, half and half with Westhauser's Gro-Kwick Acid Peat, or some acid material such as decayed leaves, rotten straw or vegetable refuse, firm this well around the roots of the plants. We recommend that a handful of sulphur be put around each plant in the spring. Give the one-year plants one-half ounce of Sulphate of Ammonia, for the older plants increase one-half ounce for each additional year. Do not let the Sulphate of Ammonia get in contact with the foliage. This can be purchased at your local feed or hardware store, and is very inexpensive.

Cumberland

CUMBERLAND

The Leader of All Blacks

The best and most dependable of ALL Blackcaps. Cumberland does exceptionally well in all climates; produces biggest cash crops. Will grow and thrive excellently on any kind of soil. It is the firmest of all and holds its size to the end better than any of the Raspberries of today. It does not crumble while picking. Buyers pay top prices for this beautiful, most attractive, large jet Blackcap. The seeds are comparatively small and their luscious sweet flavor makes them a favorite to eat fresh, for table and canning, delicious fresh frozen.

of State Certified Raspberries . . .

MORRISON BLACKCAP

The Elephant of the Blackcap Family

This outstanding variety was found by County Agent P. Croosman of Pennsylvania, growing wild in Girard. He was attracted by all its qualities, including the unusually large size, even larger than the Cumberland. Just think, mammoth, glistening, jet-black berries, highly flavored and not very seedy. Extra large, measuring up to 1 inch in diameter and holding their size until the last are picked. The plants are heavy, strong, thrifty and disease-resistant. This year we have an excellent lot of hardy, northern grown plants; however, they are very limited so order now and avoid disappointment. (See blue block, page 14, for prices.)

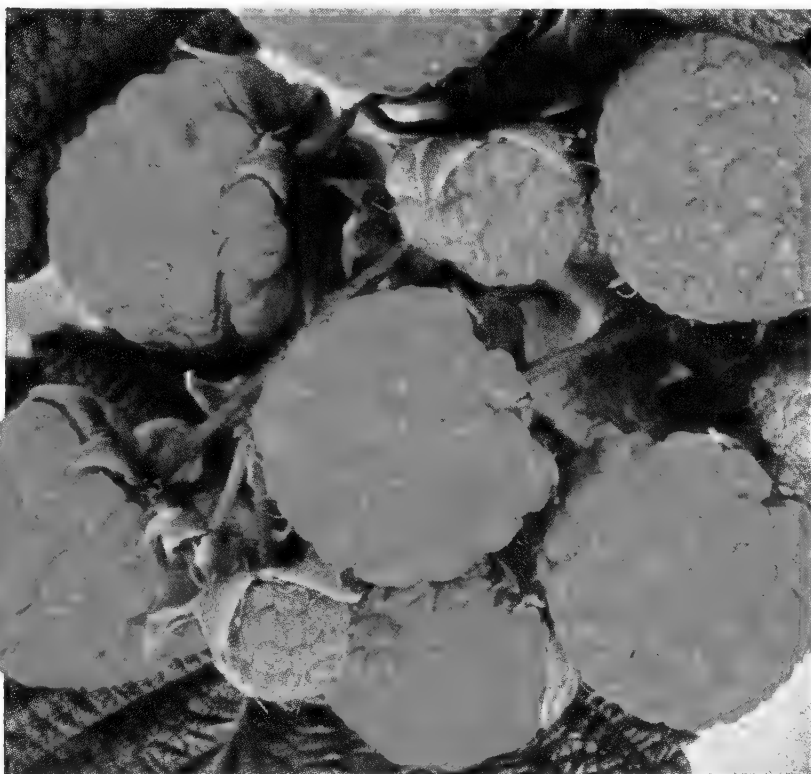

Morrison Blackcap

LATHAM

(Midseason)

The Most Profitable Standard Commercial Red Raspberry

Unexcelled as the best medium to late variety of Red Raspberries. It thrives on all well drained soil, and produces heavily in all localities. It is very hardy and does not winter-kill, even at 45 degrees below zero. The large, beautiful, rich, dark red berries often measure an inch in diameter. They are firm and have an excellent keeping quality; delicious, luscious berries for canning and shipping as well as for table use. Ideal fresh frozen. (See blue block, page 14, for prices.)

Westhauser's BLACKBERRIES

Eldorado—Productive, Firm and Profitable

The choice of commercial grower and housewife for the good old-fashioned jams, pies, preserves and fresh fruit for the table, coming just after the Raspberry season when but little other fruit is available. They ripen 10 days after Dewberries and the harvest extends to the forepart of September; they are the last of all spring and summer berries in the season and the trade is willing to pay well for them. The canes grow sturdy and upright, and are hardy enough to need no winter protection.

The berries are large, uniform in size, jet-black, and do not turn red after being picked. They have a flavor that always calls for more and are firm enough to ship to distant markets, assuring good prices.

Its sturdiness and freedom from disease, especially orange rust, the common enemy of all Blackberries, has made ELDORADO the leading variety with the commercial grower.

Alfred—The Coreless Blackberry

The coreless Blackberry, originated in Michigan, the state that produces fruit with the flavor. The color is a glossy jet-black, the flavor sweet and delicious, and it is nearly seedless and coreless. A hardy plant that produces mammoth berries, often 1 3/4 inches long. It does equally well in cold sections. Why not include a few in your order and get started raising this profitable berry?

CREAM OF THE PATENTED ROSES

PEACE. (Plant Patent No. 591.) We might well use this whole page extolling the merits of this grand new Rose. Adjudged by experts to be one of the greatest new Roses of all time. Magnificent large, very double blooms ranging in color from a deep yellow in bud, to creamy yellow with cerise-pink edging as the petals unfold, and finally an alabaster shade on fully open blooms. Plants bloom from June until freezing weather, producing exhibition quality flowers in abundance. **PRICE: 2-yr., No. 1 plants, \$2.50 each; 3 for \$6.25, postpaid.**

HEART'S DESIRE. The color is a pure, even shade of luminous red, without any shadings of maroon. It is sunproof even in the hottest weather and does not burn. LOWELL THOMAS. Bud large, long, pointed; flower large, very double (35-40 petals), high-centered, lasting, clean canary-yellow on strong stem. Vigorous, compact, bushy plants; upright, intermittent bloomer. **PRICE: \$2.00 each.**

PEARL HARBOR. The flowers of this Rose are borne on long, vigorous stems, light poppy-pink in color with reverse of petals china-rose. The buds are large, long, and pointed. The flowers are exceptionally large, double and high-centered. Some of the remarkable features of this Rose are embodied in a plant of tremendous vigor, possibly unequaled by any other Rose. GOLDEN MUSCAT

This new hardy California Grape can now be grown in every section of the country. This variety is the result of the cross of Muscat Hamburg and Diamond, which are very desirable in themselves. This cross makes a hardy, heavy bearing vine, and the quality of the fruit is similar to the White California Grape sold at all fruit markets. The berries are large, sweet and meaty, making it a wonderful variety to grow for home use and roadside stands. The bunches are large, heavy, broad shouldered, and tapering. Very compact. Being such a productive plant, we advise a good complete commercial fertilizer every spring, and you will be delighted with the crop. Supply of plants limited.

CULTURE

of

Thornless Boysenberry and Thornless Blackberry

Set plants 8 by 8 ft. in and between rows. Let the vines creep on the ground the first year. To be safe, cover the plants with straw, leaves or soil before heavy frosts. When the buds appear, tie the vines to the wire or trellis about 2½ feet above the ground. After fruiting, cut old vines or canes to the ground, remove and burn, allow the young shoots to remain on the ground as in the beginning, repeat this practice every year.

Winter Daphne

(Garland Flower)

This exquisite shrub blooms in February in mild climates. In the North it comes in full bloom the first part of March. The clusters of rose-purple to violet flowers have a sweet, fragrant aroma. The long narrow leaves are bluish green, which appear after blooming and remain into the winter. A hardy shrub not over 4 feet high which loves shade and moist locations, also does well in sunny places. Wrapped in peat moss, in which it can be planted as it is an acid-loving plant. 3-yr., field-grown, \$2.00 each; 2 for \$3.75.
